

EarthX Lithium Batteries

EarthX, Inc. was founded by an electrical engineer and a mechanical engineer whose passion for riding turned into years of research and development to find a better and lighter alternative to the 170-year-old lead acid battery technology.

Based in Colorado, EarthX is an American company on a mission to create the highest quality, best performing lithium battery line in the world, and to serve powersports dealers' needs.

EarthX's patent pending technology makes it the most advanced lithium battery; 80% lighter; the highest cranking amp cells; and the only one with a built-in Battery Management System (BMS) for performance, safety and longevity.

With cells designed specifically for a motorsports battery, EarthX's battery life is designed to last up to 8-years with a low self-discharge rate of 2% per month that will have your customers riding more and charging less. The cells work in temperatures ranging from -30C to 60C and won't freeze or boil.

The brass, center-mounted terminals have a universal fitment with no left or right polarity that garners superior electrical connection. On the outside, the lithium battery has a high-strength, watertight plastic case that is lighter than carbon fiber composite material.

EarthX lithium batteries come with a two-year full warranty.

You could ride **NAKED** to take weight off your bike... or you could just buy a premium **EarthX** lithium battery!

80% lighter and lasts up to 4X longer than your ancient technology battery!

Cell balancing built in
NO SPECIAL CHARGER NEEDED

Over charge protection
Over discharge protection
Best warranty on the market

The **earthX** Difference!

The **ONLY** lithium battery with built in electronics (BMS) for safety, performance and reliability.

We sell direct to dealers... Become a dealer on our site!
